Here you can find the list of all the datasets available for the test platform (match-up databases (MDB) files and associated validation reports). Please note that almost accessible files have been updated on October, 15, 2018 mainly to provide better consistency regarding the processing chain used to generate the MDB files and associated reports. Minor bugs in some figures have been corrected (essentially in Figure 1.a and 5.b) and some adjustments have been made in the temporal and spatial search radius for SMAP products.
